The Next Generation of Installation

TACTI  ES™

BREAK FREE!

InterfaceFLOR intervened
**SO NOW YOU
CAN BREATHE EASIER**

Introducing a glue-free world with TacTiles by InterfaceFLOR Commercial. InterfaceFLOR pioneered flooring flexibility with modular carpet, and now we've developed the next generation of installation. So stop your suffering and enjoy convenient installation as well as easy replacement and reclamation. Need any more reasons to kick that ugly and sticky habit?

I'M OFF GLUE

and I've got history on my side

With more than 30 years of laying the foundation for North America's flooring, InterfaceFLOR Commercial's dimensionally stable backing has stood the test of time. It's the backbone of functionality, strength and freedom. And it's infused with Intersept®, a patented antimicrobial preservative built into the carpet to protect it against mold, mildew, bacteria and odor-causing microorganisms.

In other words, InterfaceFLOR's backing ensures all your future habits are prosperous and long lasting.

Only InterfaceFLOR Commercial's 30 plus years of freelay backing capabilities can provide the groundwork for the TacTiles revolutionary installation system.

I'M OFF GLUE

and I'm free to work
without disruption

Because TacTiles contain no liquid components, the use of them virtually eliminates the issue of VOCs (Volatile Organic Compounds). So they can be installed almost anywhere at anytime – making carpet installation convenient for you. Take control of your life, your office and your floor. Do the right thing. Ditch glue.

TacTiles can be installed
almost anywhere at anytime.

I'M OFF GLUE and I'm in control again

With TacTiles, you can create a durable installation of InterfaceFLOR Commercial carpet tiles over your existing floor* without permanent adhesion. The TacTiles adhere tiles to one another, creating a "floating floor" – making for easy installation, removal and replacement. So whether you're updating the entire 17th floor, creating an area rug or replacing a couple of tiles, you'll get dimensional strength with individual flexibility. Whereas with non-releasable full spread glues, tiles are permanently stuck to the floor and thus require digging up the carpet when it's time to replace. This may damage the substrate beneath, leaving battle scars no floor should endure. Not to mention, it doesn't give you the freedom and control that a glue-free modular floor can provide.

*Not recommended for installation over existing carpet. Be sure to test for moisture and apply a barrier coat as needed. Reference InterfaceFLOR Commercial's TacTiles Installation Instructions for details.

Unlike with non-releasable full spread glue, TacTiles do not require "digging" up the flooring for removal and replacement, thus alleviating future labor cost and potential damage to existing substrates.

I'M OFF GLUE and I'm stronger than ever

Being pulled by the dark and sticky side? Don't sweat it – TacTiles by InterfaceFLOR Commercial have you and your floor covered. It all started more than 30 years ago when InterfaceFLOR introduced freelay tile capabilities to North America. And now with more than three decades of proven performance, only InterfaceFLOR's dimensionally stable backing can provide the groundwork for your newfound freedom. Designed to “grab” the floor for wall-to-wall applications, as well as for area rugs, the mold and mildew-resistant backing doesn't upcurl or buckle. The addition of TacTiles allows for individual tile flexibility yet magnifies InterfaceFLOR's backing strength as the InterfaceFLOR tiles unite to provide unsurpassed flooring performance. All this helps maintain your flooring investment, as well as endure hedging, heavy foot traffic and even a forklift. Are you a believer yet?

Even the heaviest traffic does not impact your installation.

The TacTile system provides a blanket of strength while maintaining individual tile flexibility.

I'M OFF GLUE

and the world is a better place for it

At InterfaceFLOR, every creative, manufacturing and building decision we make is intended to move us closer to eliminating any negative impact our company could have on our environment. That's why we created our ReEntry® Carpet Reclamation program.

Almost all vinyl-backed carpet tile can be reclaimed, reused or repurposed through this program, ensuring there'll be less landfill waste. InterfaceFLOR Commercial easily recycles its reclaimed carpet, including TacTiles, using Cool Blue™ Technology to generate new carpet tile backing for future generations while reducing its dependency on natural resources. In fact, use of TacTiles instead of traditional glue results in a reduction in the environmental footprint of more than 90%. So InterfaceFLOR meets its environmental mission while you kick your glue habit. Talk about a win-win.

TacTiles and InterfaceFLOR carpet tile can be reused or recycled through InterfaceFLOR's ReEntry Carpet Reclamation Program.

With over 30 years of proven performance, InterfaceFLOR's dimensionally stable backing lays the groundwork for your newfound freedom.
